AtoB

How our features help our customers save on fuel costs

Fleets have been using the same payment and fuel card technology for decades - stuck with 5-10¢ rebates or discounts and left with little to control their bottom line. From fuel fraud and theft, to lack of controls and real-time insights, the outdated technology costs fleets far in excess of what they get back from the simple rebate. Sadly, fleets have had to just accept these unnecessary costs as "the cost of doing business".

AtoB's fuel optimization software is built on top of an industry-first "next-gen" fuel card that enables more security and premier savings while giving control back to fleets. AtoB's ability to reduce the "total cost of fueling" far outweighs the benefits of upfront rebates or discounts, with fleets saving an average of $0.43/gallon partnering with AtoB. Here's how:

⌖ Telematics

Monitor and block transactions that aren't physically close to an associated fleet vehicle or those that exceed a vehicle's fuel capacity

Our customers save an average of

11¢ per gallon

⇌ Set Restrictions

Take control over when and how your drivers can use their fuel card, ensuring your drivers only make authorized purchases
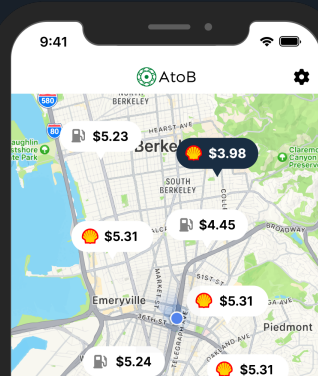

Our customers save an average of

6¢ per gallon

🔓 Card Unlock

Ensure your cards can only be used by authorized drivers, protecting you from fuel theft and fraud through the AtoB driver app

Our customers save an average of

5¢ per gallon

⌖ Optimal Station Selection and AtoB Discount Network

Optimal Station Selection factors in all fuel listings in your market and discount offers in AtoB's Discount Network to present your drivers with the best place to fuel optimizing for price and distance.

Our customers save an average of

21¢ per gallon

Total average amount saved with AtoB features: 43¢ per gallon
